

Configurable LLM service provider -

The screenshot shows a web application interface for configuring an LLM service provider. The browser address bar displays 'localhost:5173/settings'. The main content area is titled 'Select Service Provider' and features a dropdown menu with 'Groq' selected. Below the dropdown, a green status indicator 'LLM Configured' is visible. A table lists the configuration details:

Provider	Model
Groq	openai/gpt-oss-120b

The bottom section of the interface displays a network log with columns for Name, Headers, Payload, Preview, Initiator, and Timing. The log shows several requests, including 'validate-syntax', 'parse', and 'list?limit=100&t=178923196282'. The 'Preview' column shows the JSON payload for the 'list' request, which includes provider and model information.

This screenshot shows the same web application interface, but with the 'Select Service Provider' dropdown menu open. The menu lists several options: 'Groq', 'OpenAI', 'Azure OpenAI', 'Anthropic', and 'Groq' (repeated). The 'Groq' option is currently selected. The table below the dropdown remains the same, showing the configuration for 'Groq' with the model 'openai/gpt-oss-120b'. The network log at the bottom is also visible, showing the same sequence of requests as in the first screenshot.

Plain text support –

Navigate to the LeafTaps application. - <https://leafTaps.com/>

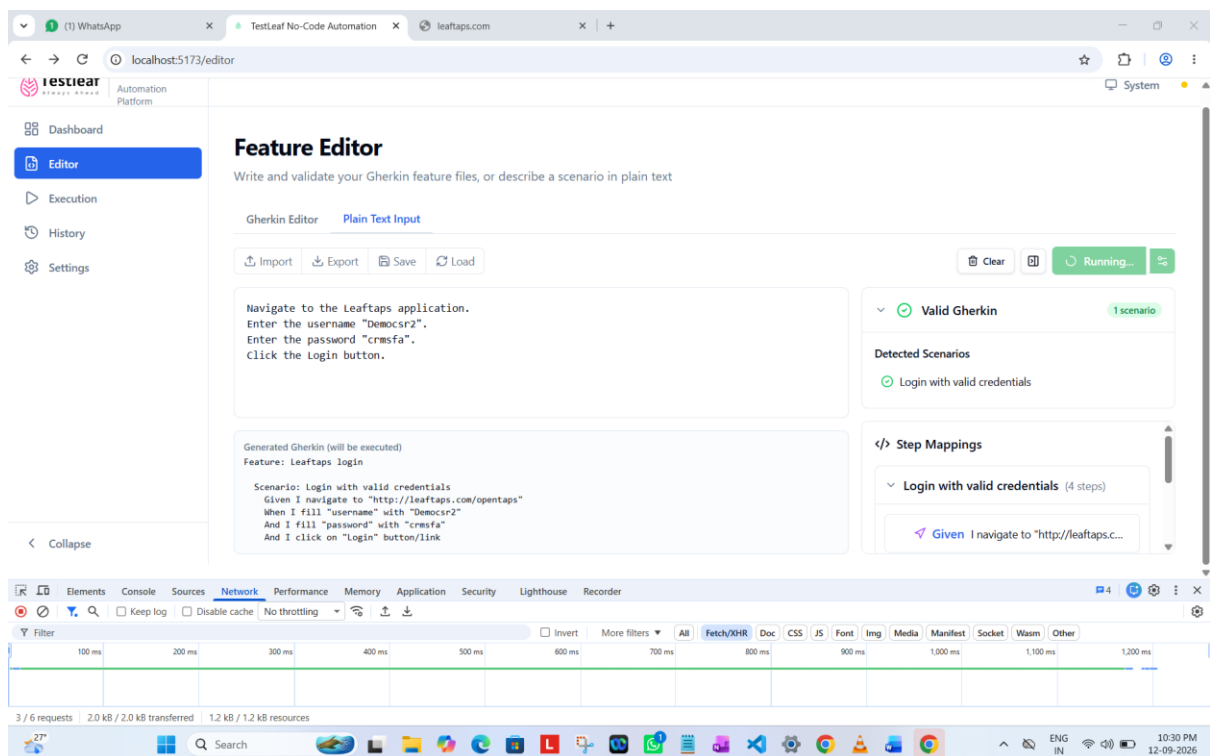

Enter the username "Democrs2".

Enter the password "crmsfa".

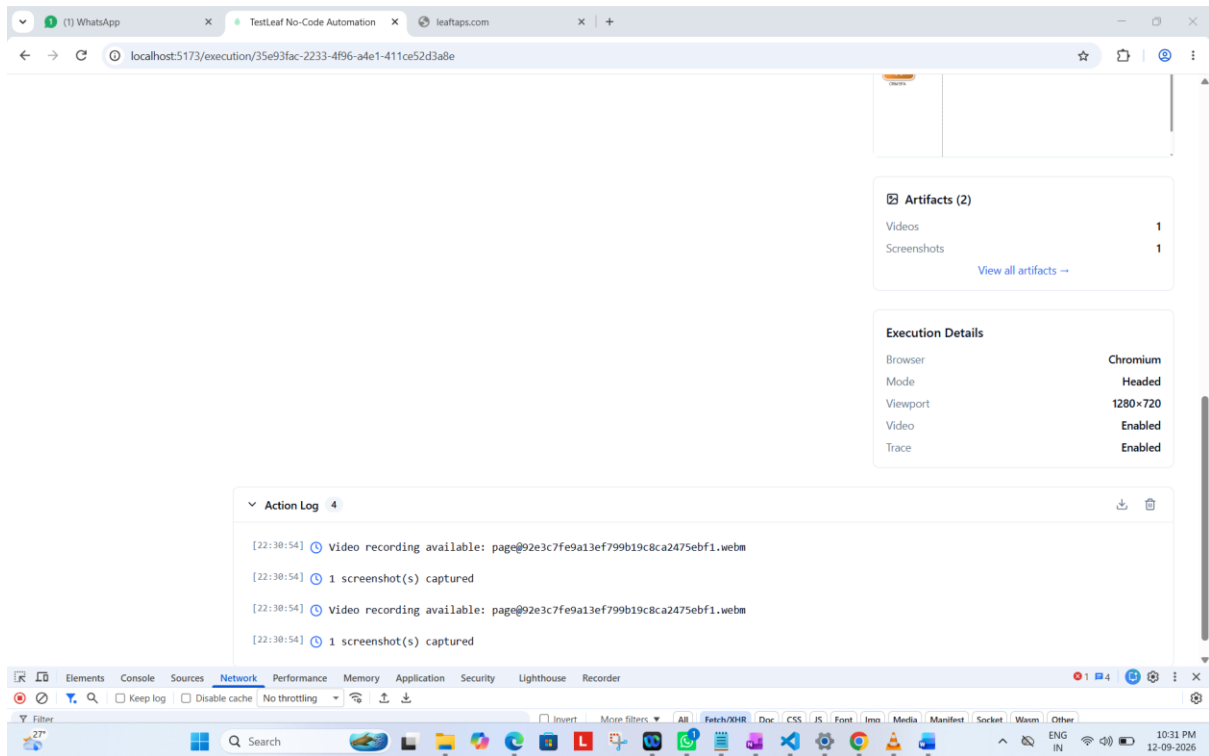

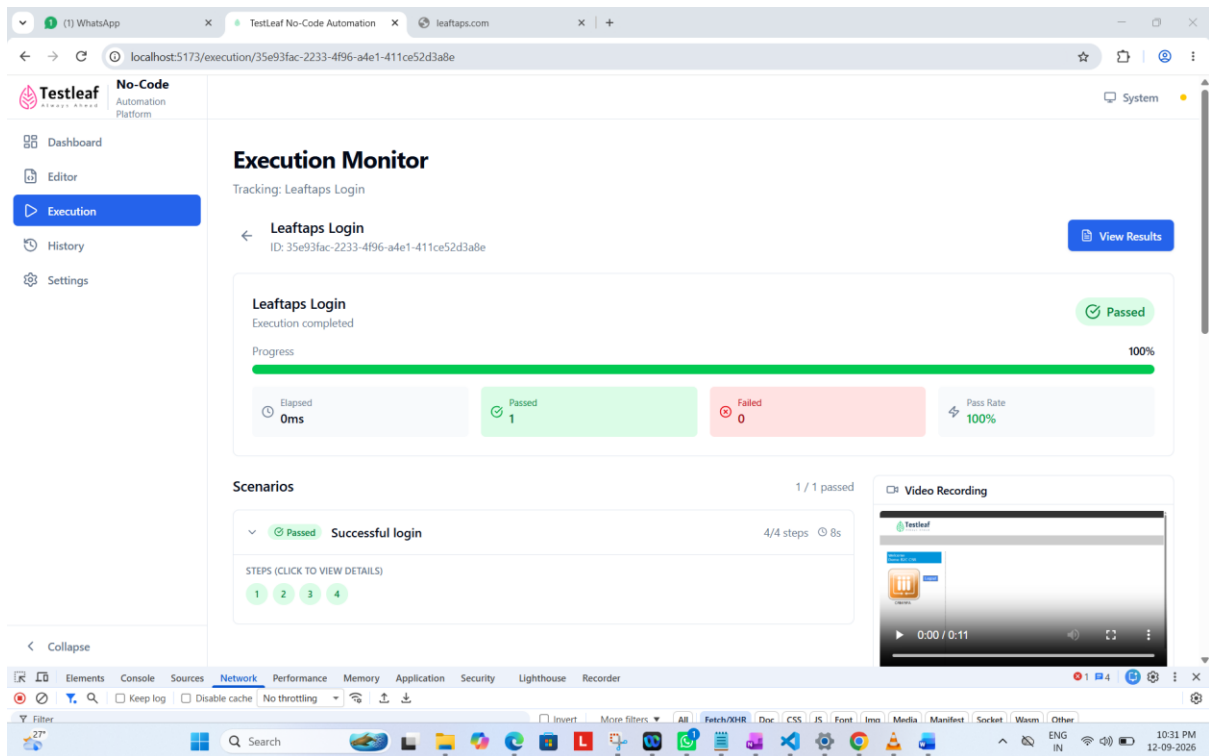

Click the Login button.

User should be logged in.
