**Define metrics for inpatient dashboard performance**: Establish key performance indicators (KPIs) to measure the effectiveness and efficiency of the inpatient dashboard.
Recommendations for Improvement:
Enhance the overall quality of the user story, consider the following:
Provide more context about the inpatient dashboard and its intended use cases.
Include specific examples of inpatient data that will be displayed on the dashboard.
Define clear acceptance criteria for inpatient data accuracy, completeness, and timeliness.
Specify technical requirements for EHR integration and data exchange protocols.
By addressing these areas, you can ensure that the consultant dashboard for inpatients is well-structured, testable, and aligned with healthcare standards and regulations.

The screenshot shows the Postman interface with a REST client request. The URL is `http://localhost:7860/api/v1/run/879300f2-4507-462d-b0b5-4f114c4315c0?stream=false`. The request body is a JSON object with the following structure:

```
{
  "output_type": "chat",
  "sender": "Machine",
  "sender_name": "AI",
  "session_id": "879300f2-4507-462d-b0b5-4f114c4315c0",
  "stream_url": null,
  "component_id": "ChatOutput-YKZn4",
  "files": [],
  "type": "text"
}
```

The response is a JSON object with the following structure:

```
{
  "timedelta": null,
  "duration": null,
  "component_display_name": "Chat Output",
  "component_id": "ChatOutput-YKZn4",
  "used_frozen_result": false,
  "token_usage": null
}
```
