

Chrome extension –

Selenium java –

Playwright type script –

Screenshot of the Testleaf application interface. The browser address bar shows `leaf taps.com/opentaps/control/main`. The Testleaf logo is visible in the top left. The main content area displays the "Leaf taps Login" form with fields for Username and Password, and a Login button. A Code Generator panel is open on the right, showing TypeScript code for a LoginPage class. The code includes imports for Page and Locator, and defines the LoginPage class with a constructor and a login method. The status bar at the bottom indicates "Welcome to Leaf taps Application - TestLeaf environment for automation engineering learning."

Generate Code

```
...typescript
import { Page, Locator } from '@playwright/test';

export class LoginPage {
  readonly page: Page;
  readonly usernameInput: Locator;
  readonly passwordInput: Locator;
  readonly loginButton: Locator;

  constructor(page: Page) {
    this.page = page;
    this.usernameInput = page.locator('username');
    this.passwordInput = page.locator('password');
    this.loginButton = page.locator('//*[@id="login"]/p[3]/input[1]');
  }

  login(): Promise<void> {
    await this.usernameInput.fill('');
    await this.passwordInput.fill('');
    await this.loginButton.click();
  }
}
```

Playwright – java

Another screenshot of the Testleaf application interface, showing the same elements as the first screenshot. The Code Generator panel is open, displaying Java code for a LoginPage class. The code includes imports for Page and Locator, and defines the LoginPage class with a constructor and a login method. The status bar at the bottom indicates "Welcome to Leaf taps Application - TestLeaf environment for automation engineering learning."
