

Prompt –

Context

Act as a senior software developer to design web page to connect Jira with mandatory option like (Email, Jira url, Jira Token) and fetch user story by giving input as issue key id

Instructions

[Mandatory] Design a "Connect Jira" button

[Mandatory] It should open a modal with mandatory options like (Email, Jira url, Jira Token)

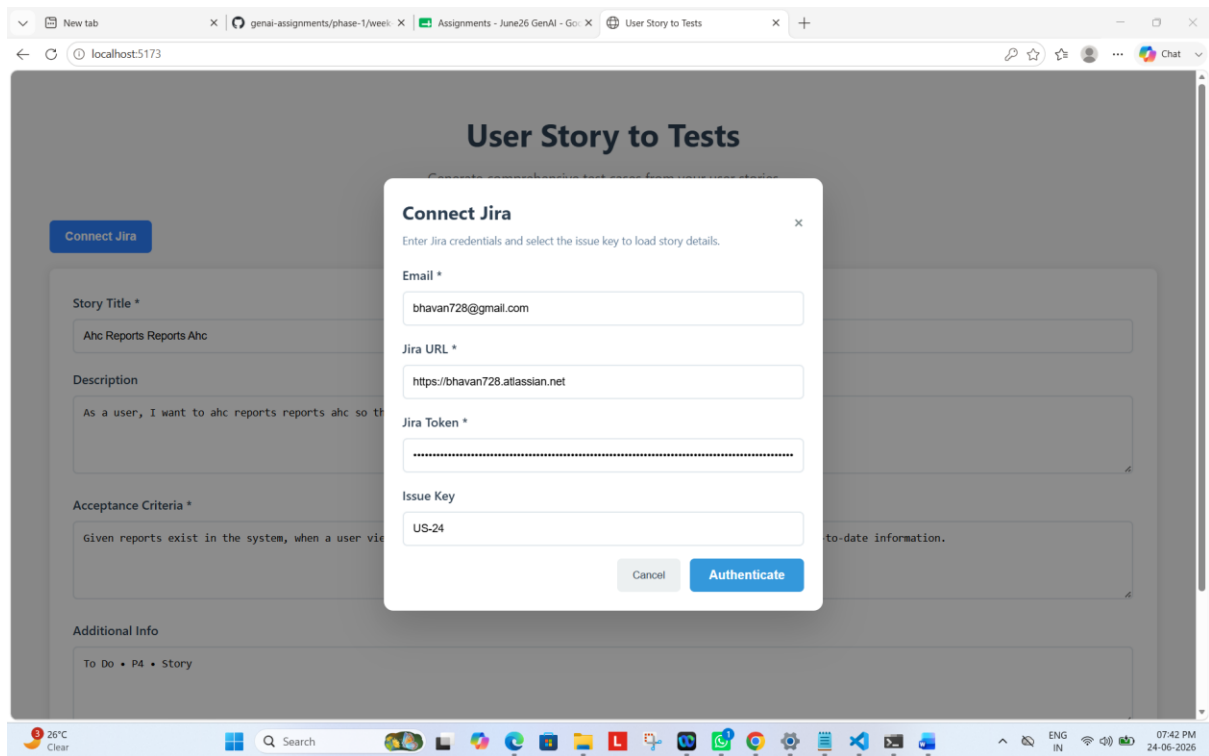

[Mandatory] Once authenticated, it should list all the user stories, tasks and other items linked with the jira account.

[Mandatory] Once user selects the issue key id

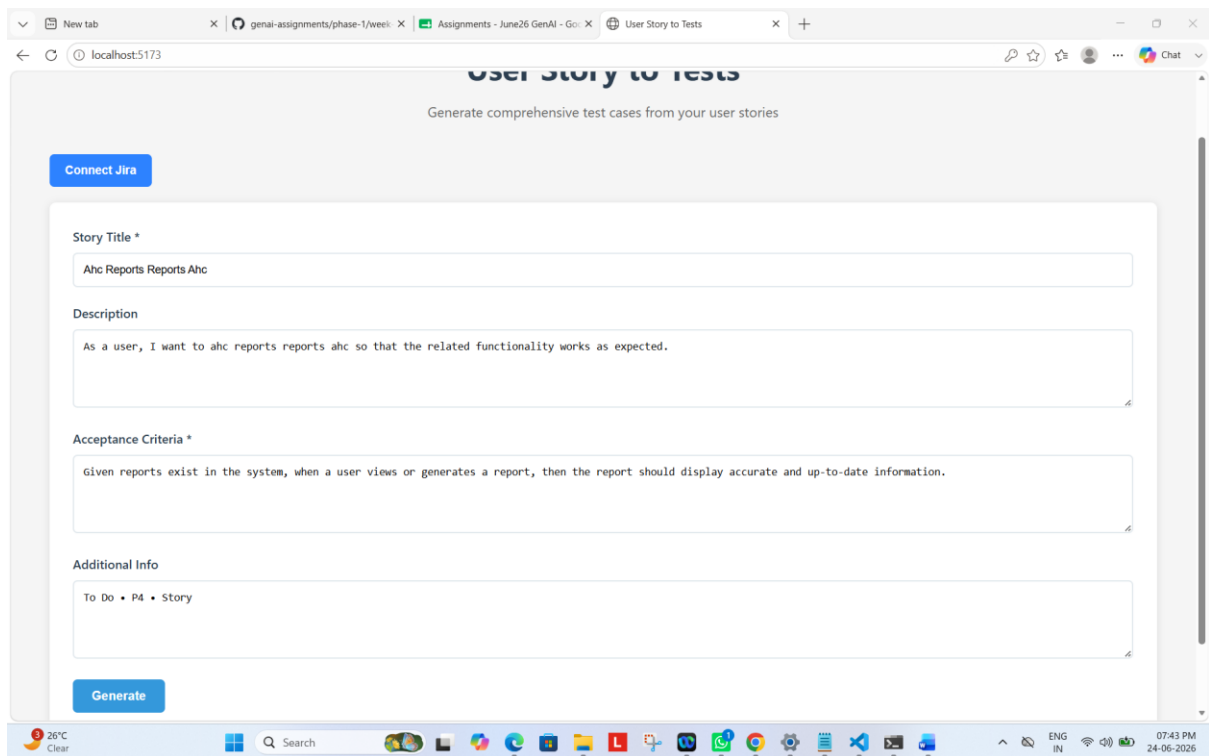

[Strict] Based on the user selection, fetch the Title, Description, acceptance criteria and additional information from the Jira and update it in the existing User story to Test page.

Output

All the details should be fetched from the selected jira issue key and updated in the existing user story to tests web page.

Fetch US-24

Add button to generate feature file

Prompt –

Context

Act as a senior software developer, analyse the existing User story to Tests code base. Add a button "Generate Feature File" to generate feature file for the user story fetched in Jira.

Instructions

[Mandatory] Analyse the existing User story to Tests code base

[Mandatory] Add a button "Generate Feature File" to generate feature file for the user story fetched in Jira

[STRICT] No changes on existing implementation

[MANDATORY] Do the changes step by step upon my approval

Output

When user click the button "Generate Feature File", Feature file should be generated based on the user story fetched in Jira.

Connected jira and fetched User story –

Browser tabs: New tab, genai-assignments/phase-1/week..., Assignments - June26 GenAI - Go..., User Story to Tests

Address bar: localhost:5173

Buttons: Connect Jira, Generate

Form fields:

- Story Title *: Ahc Reports Reports Ahc
- Description: As a user, I want to ahc reports reports ahc so that the related functionality works as expected.
- Acceptance Criteria *: Given reports exist in the system, when a user views or generates a report, then the report should display accurate and up-to-date information.
- Additional Info: To Do • P4 • Story

Windows taskbar: 25°C Clear, Search, 08:01 PM 24-06-2026

Generate Feature file button added.

Browser tabs: New tab, genai-assignments/phase-1/week..., Assignments - June26 GenAI - Go..., User Story to Tests

Address bar: localhost:5173

Buttons: Generate Feature File

Generated Test Cases

30 test case(s) generated • Model: llama-3.3-70b-versatile • Input tokens: 415 • Output tokens: 2496 • Cost: \$0.002217 (est.)

Test Case ID	Title	Category	Expected Result
▶ TC-001	View Existing Report	Positive	The report displays accurate and up-to-date information
▶ TC-002	Generate New Report	Positive	The newly generated report displays accurate and up-to-date information
▶ TC-003	Report Data Validation	Positive	The report data matches the actual data in the system
▶ TC-004	Non-Existent Report	Negative	An error message is displayed indicating the report does not exist
▶ TC-005	Invalid Report Parameters	Negative	An error message is displayed indicating the invalid parameters
▶ TC-006	Report Generation Timeout	Edge	The report generation times out and displays an error message
▶ TC-007	Large Report Data	Edge	The report displays the large amount of data without any issues
▶ TC-008	Unauthorized Access	Authorization	An error message is displayed indicating the user does not have permission to view reports

Windows taskbar: 25°C Clear, Search, 08:02 PM 24-06-2026

Output of the generated feature file –

Feature: AHC Reports Reports AHC

As a user, I want to AHC reports reports AHC so that the related functionality works as expected.

Scenario: View Existing Report

When login to the system

And navigate to the reports section

And an existing report to view

Then The report displays accurate and up-to-date information

Scenario: Generate New Report

When login to the system

And navigate to the reports section

And the generate report button

And the required report parameters

Then The newly generated report displays accurate and up-to-date information

Scenario: Report Data Validation

When login to the system

And navigate to the reports section

And an existing report to view

And the report data against the actual data in the system

Then The report data matches the actual data in the system

Scenario: Non-Existent Report

When login to the system

And navigate to the reports section

And attempt to view a non-existent report

Then An error message is displayed indicating the report does not exist

Scenario: Invalid Report Parameters

When login to the system

And navigate to the reports section

And the generate report button

And invalid report parameters

Then An error message is displayed indicating the invalid parameters

Scenario: Report Generation Timeout

When login to the system

And navigate to the reports section

And the generate report button

And report parameters that take a long time to process

Then The report generation times out and displays an error message

Scenario: Large Report Data

When login to the system

And navigate to the reports section

And a report with a large amount of data

Then The report displays the large amount of data without any issues

Scenario: Unauthorized Access

When login to the system with a user account that does not have report viewing permissions

And navigate to the reports section

And attempt to view a report

Then An error message is displayed indicating the user does not have permission to view reports

Scenario: Report Performance

When login to the system

And navigate to the reports section

And generate a report with a large amount of data

And measure the time it takes to generate the report

Then The report generation time is within the acceptable performance threshold

Scenario: Report Security

When login to the system

And navigate to the reports section

And attempt to access a report using a malicious URL

Then The system prevents access to the report and displays an error message

Scenario: Report Usability

When login to the system

And navigate to the reports section

And generate a report with a variety of parameters

Then The report is easy to understand and navigate

Scenario: Report Accessibility

When login to the system using a screen reader

And navigate to the reports section

And generate a report

Then The report is accessible and can be navigated using a screen reader

Scenario: Report Localization

When login to the system with a non-English language setting

And navigate to the reports section

And generate a report

Then The report is displayed in the correct language

Scenario: Report Data Export

When login to the system

And navigate to the reports section

And generate a report

And export the report data to a file

Then The report data is exported correctly to a file

Scenario: Report Data Import

When login to the system

And navigate to the reports section

And import report data from a file

Then The report data is imported correctly from the file

Scenario: Report Scheduling

When login to the system

And navigate to the reports section

And schedule a report to be generated at a later time

Then The report is generated at the scheduled time

Scenario: Report History

When login to the system

And navigate to the reports section

And view the history of previously generated reports

Then The report history is displayed correctly

Scenario: Report Filtering

When login to the system

And navigate to the reports section

And apply filters to a report

Then The report is filtered correctly based on the applied filters

Scenario: Report Sorting

When login to the system

And navigate to the reports section

And sort a report by a specific column

Then The report is sorted correctly based on the selected column

Scenario: Report Pagination

When login to the system

And navigate to the reports section

And generate a report with a large amount of data

And navigate through the report pages

Then The report pages are navigated correctly

Scenario: Report Printing

When login to the system

And navigate to the reports section

And generate a report

And print the report

Then The report is printed correctly

Scenario: Report Email

When login to the system
And navigate to the reports section
And generate a report
And email the report to a recipient
Then The report is emailed correctly to the recipient

Scenario: Report Error Handling

When login to the system
And navigate to the reports section
And generate a report with invalid parameters
Then An error message is displayed indicating the invalid parameters

Scenario: Report Timeout

When login to the system
And navigate to the reports section
And generate a report that takes a long time to process
Then The report generation times out and displays an error message

Scenario: Report Cancellation

When login to the system
And navigate to the reports section
And generate a report
And cancel the report generation
Then The report generation is cancelled correctly

Scenario: Report Duplicate Generation

When login to the system
And navigate to the reports section

And generate a report

And attempt to generate the same report again

Then An error message is displayed indicating the report is already being generated

Scenario: Report Invalid Data

When login to the system

And navigate to the reports section

And generate a report with invalid data

Then An error message is displayed indicating the invalid data

Scenario: Report Data Corruption

When login to the system

And navigate to the reports section

And generate a report

And corrupt the report data

Then An error message is displayed indicating the corrupted data

Scenario: Report System Crash

When login to the system

And navigate to the reports section

And generate a report

And simulate a system crash

Then The system recovers from the crash and the report is generated correctly

Scenario: Report Backup and Recovery

When login to the system

And navigate to the reports section

And generate a report

And backup the report data

And simulate a system crash

And recover the report data from the backup

Then The report data is recovered correctly from the backup
