

Contextual Relevancy –

The screenshot shows the Testleaf Evaluation Suite interface. At the top, there are tabs for 'Single Evaluation', 'Batch Evaluation', 'Multi-Turn Evaluation', 'Golden Dataset', and 'Custom Metrics (G-Eval)'. Below these, there's a 'Metrics' section with checkboxes for 'All', 'Faithfulness', 'Contextual precision', 'Contextual recall', 'Contextual relevancy' (checked), 'Pii leakage', 'Bias', 'Toxicity', 'Hallucination', 'Ragas', and 'Answer relevancy'. The 'Query/User Input' section contains the text: 'What's the maximum weight for standard shipping on UrbanCart?'. The 'Retrieval From RAG Or From Document' section contains three text boxes: 'Standard shipping covers packages up to 50 lbs', 'Items over 50 lbs require freight shipping with a separate quote', and 'UrbanCart was founded in 2011.'. There is an '+ Add Context' button and a 'Click for Evaluation' button at the bottom.

The screenshot shows the Testleaf Evaluation Suite interface displaying the results of a Contextual Relevancy evaluation. The 'Response' section shows '3,617 tokens', '2,539 in', '1,078 out', and '\$0.0024'. The 'METRIC' section shows 'CONTEXTUAL RELEVANCY'. The 'SCORE' section shows '0.6667'. The 'VERDICT' section shows 'PARTIALLY RELEVANT'. The 'EXPLANATION' section states: 'The score is 0.67 because the retrieval context includes relevant statements like "Standard shipping covers packages up to 50 lbs" and "Items over 50 lbs require freight shipping with a separate quote", but also contains irrelevant information such as "UrbanCart was founded in 2011", reducing overall relevance.' The 'EVALUATION INPUT' section shows the 'Query: What's the maximum weight for standard shipping on UrbanCart?' and the 'Retrieved Context: Standard shipping covers packages up to 50 lbs, Items over 50 lbs require freight shipping with a separate quote, UrbanCart was founded in 2011.'
