

Create databases and collection –

The screenshot shows the MongoDB Cloud Explorer interface. The left sidebar displays the 'Data Explorer' section with a tree view of clusters. The 'testcasegenerator' cluster is selected, showing two collections: 'test_cases' and 'user_stories'. The main panel displays a table of these collections with their properties, storage size, data size, documents, average document size, indexes, and total index size.

Collection name	Properties	Storage size	Data size	Documents	Avg. document size	Indexes	Total index size
test_cases	-	128.54 MB	0 B	0	0 B	1	479.23 kB
user_stories	-	3.11 MB	0 B	0	0 B	1	36.86 kB

Create search index for test case and user story –

The screenshot shows the MongoDB Cloud Explorer interface, specifically the 'Search & Vector Search' section. The left sidebar displays the 'Search Indexes' section with a tree view of search indexes. The main panel displays a table of search indexes with their database, collection, index name, status, queryable status, type, index fields, and documents (estimated).

Database	Collection	Index Name	Status	Queryable	Type	Index Fields	Documents (Estimated)
testcasegenerator	test_cases	tc_vector_index	READY	✓	vectorSearch	"embedding", "id", "module", "title", "description", "expectedResults", "id", "title", "module"	0 (0%) indexed of 0
testcasegenerator	test_cases	testcases_bm25	READY	✓	search	"automationManual", "createdBy", "description", "expectedResults", "id", "title", "module"	0 (0%) indexed of 0
testcasegenerator	user_stories	vector_index_userstories	READY	✓	vectorSearch	"embedding", "jiraMetadata.projectKey", "status.name", "priority.name", "assignee.displayName", "id", "title", "module"	0 (0%) indexed of 0

User query - OP and IP Login

The screenshot shows the 'RAG Pipeline' interface in a web browser. The left sidebar contains navigation options: 'Convert to JSON', 'Embeddings & Store', 'Query Preprocessing' (highlighted), 'Vector Search', 'BM25 Search', 'Hybrid Search', 'Score Fusion', 'Summarize & Dedup', and 'Prompt & Schema'. The main content area is titled 'Query Transformation Pipeline' and shows the following steps:

- ORIGINAL QUERY**: "OP and IP Login"
- NORMALIZATION**: "op and ip login" (4 tokens)
- ABBREVIATION EXPANSION**: 2 expansions. Expanded: "outpatient and inpatient login". It shows "op" expanding to "outpatient" and "ip" expanding to "inpatient".
- SYNONYM EXPANSION**: 5 variations. It lists "1. 'outpatient and inpatient login'" and mentions "Multiple query variations generated for comprehensive search coverage".

The bottom of the screen shows a Windows taskbar with various application icons and system status indicators.

This screenshot shows the continuation of the 'RAG Pipeline' interface. The 'ABBREVIATION EXPANSION' step is still visible. The 'SYNONYM EXPANSION' step now displays three variations:

1. "outpatient and inpatient login"
2. "outpatient and inpatient signin"
3. "outpatient and inpatient authenticate"

Below these variations, it indicates "+ 2 more variations". A 'Processing Metadata' table is shown:

Processing Time	Token Count	Abbreviations	Synonyms
0ms	4	2	1

At the bottom, a section titled 'How Query Preprocessing Works' provides a brief explanation of the steps:

1. Normalization: Converts text to lowercase, removes special characters, extracts test case IDs
2. Abbreviation Expansion: Expands healthcare abbreviations (UHID → unique health id, OTP → one time password)
3. Synonym Expansion: Generates multiple query variations using synonyms (patient → customer/user/individual)
4. Search Execution: Uses all variations to perform comprehensive search with better recall

BM25 Search –

Text - tc001

Data – tc_001 – expecting 1 result. But got 0

The screenshot shows the RAG Pipeline web application interface. On the left is a sidebar with navigation options: files (Test Cases or User Stories), Embeddings & Store, Query Preprocessing, Vector Search, **BM25 Search** (selected), Hybrid Search, Score Fusion, Summarize & Dedup, Prompt & Schema, and Settings. The main content area is titled 'BM25 Keyword Search' and contains a search query input field with 'tc_001', a 'Results Limit' of 10, and a 'SEARCH' button. Below the search bar, a message states: 'BM25 Search Results: Found 0 test cases in 37ms Search Type: bm25'. A green status bar at the bottom right of the main area confirms 'Found 0 results in 37ms'. The browser's address bar shows 'localhost:3000'.

Data – TC_001 – 1 result as expected.

This screenshot shows the same RAG Pipeline interface, but with the search query changed to 'TC_001'. The search results now show one entry: '#1 TC_001' with a 'Score: 3.80'. The entry is titled 'Normal Registration' and includes details such as 'Module: Registration', 'Risk: Low', and 'Automated'. A description follows, along with a list of steps for the registration process and the expected results. The status bar at the bottom right now indicates 'Found 1 results in 63ms'. The browser's address bar remains 'localhost:3000'.

Hybrid search – tc001

The screenshot displays the RAG Pipeline application interface. The left sidebar contains a navigation menu with options: Convert to JSON, Embeddings & Store, Query Preprocessing, Vector Search, BM25 Search, Hybrid Search (selected), Score Fusion, Summarize & Dedup, and Prompt & Schema. The main content area shows search results for 'Hybrid Search'. The first result is for TC_479, titled 'Billing Execution- Outstanding Bills-Collect Deposit-TRAVELLERS CHEQUE'. It includes a description, steps, expected results, and a score breakdown: BM25: 0.0% (raw: 0.00), Vector: 85.6% (raw: 0.86), Hybrid: 17.1%. The second result is for TC_3436, titled 'Billing Execution- Outstanding Bills-Collect Deposit-TRAVELLERS CHEQUE'. It also includes a description, steps, expected results, and a score breakdown: BM25: 0.0% (raw: 0.00), Vector: 85.3% (raw: 0.85), Hybrid: 17.1%. The bottom status bar shows the temperature as 24°C and the time as 10:47 PM on 29-07-2026.

The screenshot displays the RAG Pipeline application interface. The left sidebar contains a navigation menu with options: Convert to JSON, Embeddings & Store, Query Preprocessing, Vector Search, BM25 Search, Hybrid Search (selected), Score Fusion, Summarize & Dedup, and Prompt & Schema. The main content area shows search results for 'Hybrid Search'. The first result is for TC_990, titled 'Search - Ready For Checkout'. It includes a description, steps, expected results, and a score breakdown: BM25: 0.0% (raw: 0.00), Vector: 85.3% (raw: 0.85), Hybrid: 17.1%. The second result is for TC_001, titled 'Normal Registration'. It includes a description, steps, expected results, and a score breakdown: BM25: 0.0% (raw: 0.00), Vector: 85.2% (raw: 0.85), Hybrid: 17.0%. The bottom status bar shows the temperature as 24°C and the time as 10:47 PM on 29-07-2026.

AI-Generated Summary

The search results for "test cases" yield a list of 19 test cases across various modules, including Registration, IP Billing, OP Billing, Doctors-Wards, and Admin. The test cases are designed to verify specific functionalities, such as patient search, report viewing, and patient checkout. The majority of the test cases have a high relevance score, ranging from 84.6% to 85.8%.

The test cases can be broadly categorized into several areas, including patient search and management, report generation and viewing, and user authentication and authorization. Some test cases focus on specific features, such as patient counseling messages, patient history, and prescription requests.

The modules with the most test cases are Doctors-Wards and IP Billing, with 6 and 4 test cases, respectively. The Registration module has 3 test cases, while the Admin and OP Billing modules have 1 test case each.

Overall, the search results provide a comprehensive overview of the test cases related to patient management and healthcare operations. The high relevance scores indicate that these test cases are highly relevant to the search query, and can be useful for testing and validation purposes.

The screenshot displays the RAG Pipeline Testleaf interface. The left sidebar contains navigation options: files (Test Cases or User Stories), Embeddings & Store, Query Preprocessing, Vector Search, BM25 Search, Hybrid Search, Score Fusion, Summarize & Dedup, Prompt & Schema, and Settings. The main content area shows the 'Complete RAG Pipeline Results (10-Step Process)' with a progress bar indicating the steps: 1. User Input → 2. Preprocessing → 3. Hybrid Search → 3.5. User Story Search → 4. RRF Re-Rank → 5. Dedup → 6. Summarize → 7. Prompt → 8. Generate → 9. Validate → 10. HTML. The results show 50 hybrid search results, RRF Re-Ranking Applied, 0 duplicates removed, Top 10 results, and Validation Passed. A '10-Step Pipeline Completed' section lists the steps and their status. Below this, the 'Query Preprocessing' section shows applied transformations. The 'Reference Test Cases (Retrieved from Database)' section displays a table of test cases.

Test Case ID	Title	Module	Priority	Preconditions	Test Steps	Expected Results
1	Launch the application					
2	Log in to the application with valid					

The screenshot displays the RAG Pipeline Testleaf interface. The left sidebar contains navigation options: files (Test Cases or User Stories), Embeddings & Store, Query Preprocessing, Vector Search, BM25 Search, Hybrid Search, Score Fusion, Summarize & Dedup, Prompt & Schema, and Settings. The main content area shows the 'Test Query / User Story' section with a text input field containing 'Priority: P1', 'Risk: Medium', and 'Status: In Progress (Functional Change Pending)'. Below this, the 'Sample Test Cases (JSON)' section displays a JSON object representing a test case. The bottom section shows a network log with 15 requests and 111 kB transferred.
