User story file -

The screenshot shows the Postman interface with a workspace named "My Workspace". The left sidebar lists collections, including "RAG Backend API Collection-June". The main panel displays a POST request to "((base_url))/api/upload-excel". The request body is set to "form-data". The "Body" tab shows a table with the following data:

Key	Value	Description
file	2 files	
dataType	userstories	Either 'testcases' or 'userstories'
sheetName	stories	
Key	Value	Description

The response is a 200 OK status with a 514 ms response time and 883 B of data. The response body is a JSON object:

```
{  "success": true,  "message": "User stories file converted successfully",  "outputFile": "stories-1785348568321.json",  "output": "Converting 198 rows from sheet 'stories' into E:/My Files/.Testleaf/Materials/Phase 2/25072026 - RAG Ingestion Pipeline/rag-mongo-demo-v9 (1)/rag-mongo-demo-v9/src/data/stories-1785348568321.json\nFiltered out: 0 empty rows"}
```

TC-

The screenshot shows the Postman interface with a workspace named "My Workspace". The left sidebar lists collections, including "RAG Backend API Collection-June". The main panel displays a POST request to "((base_url))/api/upload-excel". The request body is set to "form-data". The "Body" tab shows a table with the following data:

Key	Value	Description
file	testcases.xlsx	
dataType	testcases	Either 'testcases' or 'userstories'
sheetName	Testcases	
Key	Value	Description

The response is a 200 OK status with a 969 ms response time and 665 B of data. The response body is a JSON object:

```
{  "success": true,  "message": "Test cases file converted successfully",  "outputFile": "converted-1785349486673.json",  "output": "Sheet 'Testcases' not found. Using first sheet: 'testcases'\nConverted 6354 rows from 'testcases' into E:/My Files/.Testleaf/Materials/Phase 2/25072026 - RAG Ingestion Pipeline/rag-mongo-demo-v9 (1)/rag-mongo-demo-v9/src/data/converted-1785349486673.json\n"}"

Embedding – user story

The screenshot shows the Postman interface with a workspace named "My Workspace". The left sidebar lists various collections, with "RAG Backend API Collection-June" expanded to show "Embeddings" and "Create Embeddings Batch". The main panel displays a POST request to the endpoint `{{base_url}}/api/create-embeddings-batch`. The request body is a JSON object:

```
1 {
2   "files": [
3     "stories-1785348508321.json"
4   ],
5   "scriptName": "create-userstories-embeddings-batch-mistral.js",
6   "jobType": "userstories"
7 }
```

The response is a 200 OK status with a response time of 743 ms and a body of 459 B. The response body is a JSON object:

```
1 {
2   "success": true,
3   "jobId": "job-1785349289048-vb3a5kaa6",
4   "message": "Batch embedding creation started using create-userstories-embeddings-batch-mistral.js",
5   "filesCount": 1,
6   "jobType": "userstories"
7 }
```

Embedding TC –

The screenshot shows the Postman interface with a workspace named "My Workspace". The left sidebar lists various collections, with "RAG Backend API Collection-June" expanded to show "Embeddings" and "Create Embeddings". The main panel displays a POST request to the endpoint `{{base_url}}/api/create-embeddings-batch`. The request body is a JSON object:

```
1 {
2   "files": [
3     "converted-1785349486673.json"
4   ],
5   "scriptName": "create-embeddings-batch-mistral.js",
6   "jobType": "testcases"
7 }
```

The response is a 200 OK status with a response time of 596 ms and a body of 445 B. The response body is a JSON object:

```
1 {
2   "success": true,
3   "jobId": "job-1785349682440-hgd7s2gmf",
4   "message": "Batch embedding creation started using create-embeddings-batch-mistral.js",
5   "filesCount": 1,
6   "jobType": "testcases"
7 }
```

2   "success": true,
3   "summary": "The search results for 'login test' yield a relevant outcome. The top result, identified as TC_001, is titled 'Login functionality test' and focuses on testing user login with valid credentials. This suggests that the search query is related to verifying the functionality of a login system, ensuring that users can successfully access a platform or application using their correct login credentials.\n\nIn essence, the search result appears to be related to quality assurance or testing procedures, where the goal is to validate the login process and identify any potential issues or errors. The test case, TC_001, likely outlines the steps and expected outcomes for a successful login test, providing a framework for evaluating the login functionality.\n\nOverall, the search result provides a clear and concise direction for testing login functionality, which can be useful for developers, testers, or administrators responsible for ensuring the security and reliability of a login system.",
