

Implemented LLM Based chunking.

Model Configuration will be in .env file.

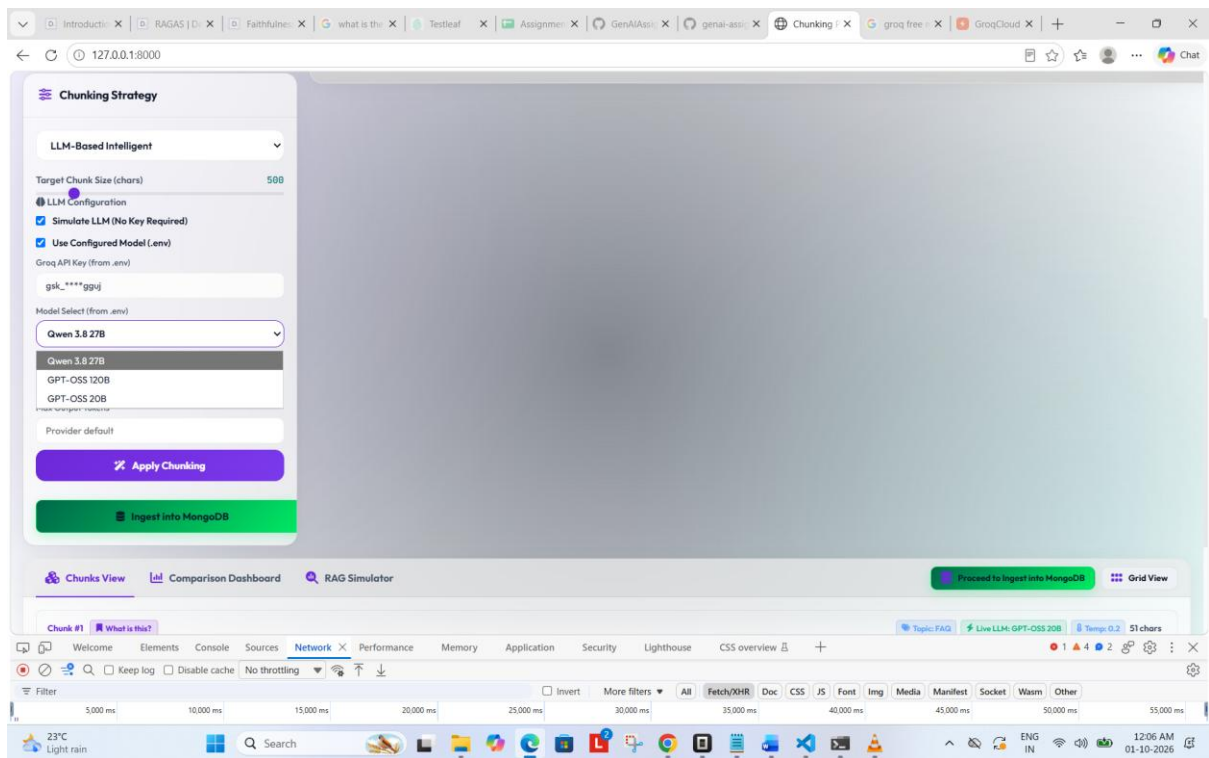

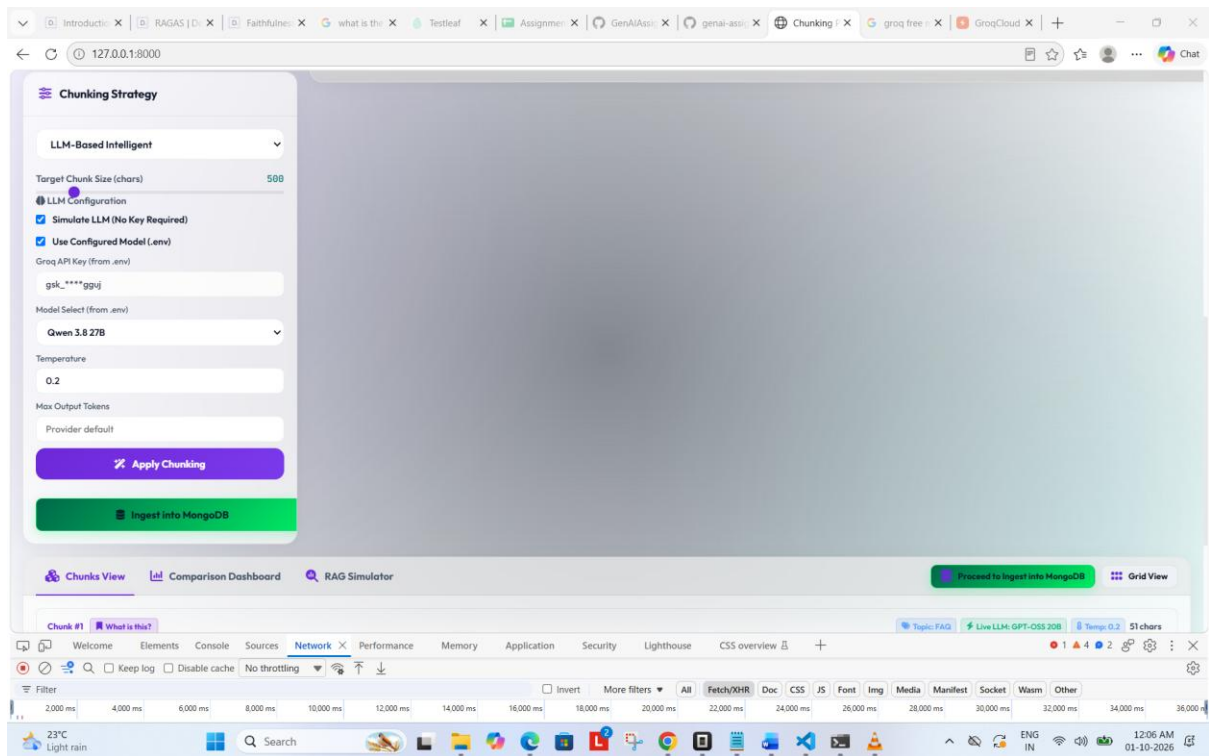

UI reflects the data based on .env file.

.env config –

```

UI – options based on .env configured models.

Chunking using gpt oss 120b model –

The screenshot displays a web application interface with four document chunks. Each chunk contains a topic, a title, and a paragraph of text. The chunks are:

- Chunk #1: Professional Conduct** (227 chars): All employees are expected to maintain the highest standards of professional conduct, integrity, and respect in their daily interactions. The company values a diverse and inclusive workplace environment.
- Chunk #2: Dress Code and Professional Appearance** (237 chars): The company maintains a business-casual dress code. Employees are expected to dress appropriately for their role, particularly when representing the company in client meetings or external events.
- Chunk #3: Acceptable Use of Technology** (420 chars): Company laptops, networks, and communication tools (such as Slack and Email) are provided strictly for business purposes. - All communication must remain professional and respectful. - Sensitive company data must never be shared on unauthorized public channels or personal storage devices. - Personal internet browsing is permitted in moderation, provided it does not impact productivity.
- Chunk #4: Core Hours and Workplace Attendance** (228 chars): Our standard work week is 40 hours. Core collaborative hours are between 10:00 AM and 4:00 PM, during which all employees are expected to be available for team meetings and client requests.

Below the document, a network inspector shows a successful POST request to `http://127.0.0.1:8000/chunk/llm` with a status code of 200 OK. The request headers include `Content-Type: application/json` and `Accept: */*`. The response headers include `Content-Type: text/plain` and `Cache-Control: no-cache`.

Chunking using Qwen model –
